These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess boodiversity, and for nutritional purposes. The present sequence is a cDNA boodiversity, and for nutritional purposes.

by Northern analysis in Clock mutant versus wild type mice The
human Clock gene (see Aw66/450) has also been identified The
invention provides isolated and purified CLOCK polyapitides. Per
polymicleotides (Including antisense), vectors and host cells. The
polymicleotides or polyapitides can be used to treat disorders of
altered or disrupted circulation rhytms e.g., jst-lag, sessonal of
altered arother sleep-wake cycle disorders such as mood states,
stress, neurological disorders, to regulate diet and food intake
especially for disbetes, to treat cardiovascular, respiratory
liver or endocrine disorders, and for diagnossis and treatment of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     circadian rhythmicity. Identification and isolation of the Clock geno involved: genetic mapping of the mouse genome (mid portion of chromosome 5); physical mapping of the Clock region; transcription unit analysis in the Clock region by (a) direct screening of SCN cDNA libraries with BAC clones as probes, (b) hybridisation selections of cDNAs from SCN libraries using BAC clones as driver, and (c) shutgun sequencing random Mid libraries made from BAC clones; transgenic mouse expression of an isolated BAC clone and the clone in the control of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (see AAW79529) that acts as a transcription factor. The Clock generating the strength of the circalan clock system: the intrinsic circadian period and the persistence of circadian rhythmicity. Identification and isolation of the Clock
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This is the complete nucleotide sequence of the murine Clock game based upon genomite axon sequences; splice donor and acceptor sites are provided in Anv61403-48. It encodes a 855-amino acid polypept (see ANV91929) that acit as a transcription factor. The Clock genome
                                                                                                                                                                                                                                                                                                                                                              Probe: human; microarray; gene expression; cervical epithelial cell;
                                                                                                                                                                                                                                                                                                                                                                                                                                  Probe #11849 for gene expression analysis in human cervical cell sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 7498 BP; 2197 A; 1534 C; 1616 G;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             abnormal cell division such as cancer.

                                             Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                            microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithellal cells. By measuring gene expression, the probes are therefore useful in grading and/or staging
                                                                                                                                                                                                              Claim 25;
                                                                                                                                                                                                                                                                                                                                                                                            27-SEP-2000;

                                                                               of diseases of the cervix, notably cervical cancer.
                                                                                                                                          The present invention relates to human single exon nucleic acid probes (SEMP). The present sequence is one such probe. The SEMPs are derived from human Heia cells. The SEMPs can be used to produce a single exon
                                                                                                                                                                                                                                             analyzing gene expression in human cervical epithelial cells
                                                                                                                                                                                                                                                           Human genome-derived single exon nucleic acid probes useful for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                marker expression pattern in untrested control samples, and the toxicity of the test compound determined rhe tissue sample is preferably selected from liver, kidney, brain, spleen, pancrous and bung. The nucleic acid molecules and methods of the invention may also be used for screening libraries of molecules for specific binding affinity, and for the first of time-funing of treatment regimens which use drugs with toxic side-effects such that the side-effects are minimised without compromising the efficacy of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            hybridiation were only observed between the sample mRNA and sequences AAA10108-A10224. In particular, sequences AAA10110, AAA10116, AAA10117, AAA10126, AAA10133, AAA10138, AAA10140, AAA10147-A10144, AAA10146, AAA10149, AAA10164, AAA10174, AAA10185, AAA10188, AAA10189, AAA10166, AAA10174, AAA10185, AAA10188, AAA10189, AAAI0189, AAA10189, AAA10189, AAA10189, AAA10189, AAA10189, AAA1018
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    aromatic hydrocarbons (PAHs) such as benzo(a)pyrene). above method is also useful for preventing a coxtoological response by initiating transcription of a gene comprising a down regulated muclet cacid molecule of the invention. Protoins senceded by the nucleic acids of the invention are useful for producing antibodies The nucleic acids of molecules are useful for producing antibodies The nucleic acids immobilised on a substrate as hybridisshle array element in a microarray forms may be used to characterise aper appreciation patterns associated with novel compounds to elucidate any toxicological esponses. The nucleic response to toxic compounds any be expected in the transcription of the producing methods of the nucleic cacids are useful for various hybridistics and to end of the nucleic acids are useful for various hybridistics.
                                           is useful for designing hybridisation probes. The nucleic or its fragment, or a protein encoded by the nucleic used to purify a ligand from a sample.
                                                                                                                                                                                                                                                                                                                                                                              The sequence is a novel mammalian nucleic acid molecule whose levels are up regulated or down regulated following treatment with a toxic compound. Dolynucleotide sequences complementary to the sequences of the invention are useful for preventing a toxiconjogical response by acting against one or more up regulated nucleic acid molecules. An agonist identified by the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel mammalian nucleic acid molecules whose levels are up regulated or down regulated following treatment with a toxic compound, useful for detecting metabolic and toxicological responses and in monitoring drug
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 1; Page 41; 89pp; English

                                                                                                                                                                                                                                                                                     AAI34086 standard; DNA; 472 BP
                                                                                                                                                                                                                                                                                                                                                        380
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 25;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human genome-derived single exon nucleic acid probes useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WPI; 2001-488901/53.

The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                steging, monitoring and prognosing diseases of the human breast, particularly those diseases with polygenic actiology. The diseases include: breast, fibrocystic changes, proliferative breast disease and non-carcinoma tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to movel single exon nucleic acid probes. The present sequence is one such probe. The present sequence is one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the properties at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, predicting, diagnosing, grading, and present.
  Primer sets for synthesizing polynucleotides, particularly the 5602
                                                                                                                                                                                                                                                                                                                                                                        Human cDNA clone (3'-primer) SEQ ID NO:7283
                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAH10448 standard; cDNA; 576 BP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       380 GYCCTCTTTGTCCTGCTGCTGCGGTGTGGGTGG 412
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 472 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Note: The sequence data for this patent did not form specification, but was obtained in electronic format

in gone therapy. The primers are useful for synthesising polynucleotides, particularly full-length CDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length CDNAs. The primers allow obtaining of the full-length CDNAs easily without any specialised methods. ARM3166 to ARM3528 and ARM3533 to ARM31673 represent human amino acid sequences; and ARM3639 to ARM31633 represent busine manio acid sequences; and ARM3639 to ARM31633 represent busine manio acid sequences; and ARM3639 to ARM31633 represent oligonucleotides, all of which are used in the exemplification for the protein and the acid sequences.
                                                                                                                                                                                                                                                                                                                                                                                            sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence, complementary to the
                                                                                                                                                                                                                                                                                                                                 the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and

AAF07178 to AAF1127 represents ESTs from Fusarium renematum. AAF11248 to AAF11853 represents ESTs from Aspergillus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         the FF cells and a substrate of expressed sequence tags (EST). The ESTs are used in the methods for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of the same genes in one or more second filamentous fungal cells. Monitoring the global expression of genes from FF cells allows the production potential of the microorganisms to be improved. New genes may be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes a method for monitoring differential expression of genes in a first filamentous fungal (F) cell relative to expression of the same genes in one or more second filamentous fungal cells. The method uses fluorescence-labeled nucleic acids isolated from

The agents identified inhibit polypeptide-induced adhesion of bacteria to extracellular matrix in the host. The active agent effects the LPXTG motifiedependent anchorage of pathogenically factors to the bacterial coll wall and are potentially useful as therepeutic agent, inhibiting binding of bacteria to the pathogenically factors to the bacterial coll wall and are potentially exfracellular matrix in the host.

                                      This sequence was used for the expression of an anther specific gene derived from Brassica napus. This sequence caused expression of the anther specific gene as antisense RNA in acrualferee plant causing pollen formation to be modified. This is esp. useful in the production of male sterile plants.
